You have to override the form\_kwargs to include the pk field: class IndustryDetailView(generic.DetailView): model = Industry template\_name = 'industry\_detail.html' def get\_context\_data(self, \*\*kwargs): context = super(IndustryDetailView, self).get\_context\_data(\*\*kwargs) query = Industry.objects.filter(company\_

If I try to upload a file that was not encrypted, an error occurs saying that the decryption failed. I can't find anything about this on the Web, but I think that the error comes from the file transferred as it is encrypted. Here is my concern: Is it possible to use this plugin for other purposes, such as to upload a file before encrypting it (in the app)?
