Bleep' is the most exotic sound synthesizer I made since a long time. Made in one week to play games and practice. Features: 1. 16 sounds + sample bank 2. Fully parametrized plugin (4* controllers and 15 parameters) 3. Full MIDI Learning 4. VST automation 5. Flexible GUI 6. Adjustable controls 7. 100% compatible with any VST host 8. PC support! Bleep' is a synthesizer, which was inspired by the sound of MOS Technology SID. However, Bleep' is not an emulator of this chipset, but only partially similar to its architecture. In addition, this VST plugin supports VST automation and full MIDI Learning. You simply need a VST compatible host to use it.
