Keywords is a feature that helps you increase the usability of your application. In short, Keywords is a feature that will allow you to define a list of search keywords that will be used by the application when you execute a search. Keywords is usually used with search engines like Google, Yahoo, Bing, etc. To manage Keywords you need to create a file called Keywords.cs under the projects main directory and do the following:

- Include the keyword toolbox
- Declare a Keyword class
- Use one of the methods: CreateNewKeyword() - Adds a new keyword RemoveKeyword() - Remove a keyword ClearKeywords() - Clear the list of keywords AddKeyword() - Add a new keyword

Program Example: `** This code example is from the following tutorial: --- using System; using System.Collections.Generic; using System.Linq; using System.Text; using System.Threading.Tasks; namespace MvcAppWithKeywords { class Keyword { public string KeywordText { get; set; } public string PageUrl { get; set; } public string KeywordId { get; set; } } class Program { static void Main(string[] args) { var keywords = new List(); keywords.Add(new Keyword() { KeywordText =`

```
"my keyword", PageUrl = "", KeywordId = "mykeyword" }); keywords.Add(new Keyword() {  
KeywordText = "another keyword", PageUrl = "", KeywordId = "anotherkeyword" });  
keywords.Add(new Keyword 77a5ca646e
