de-treated-MSU mice was lower than in the PBS-treated MSU mice. These results suggest that ADMA level may be related to the infiltration of CD8⁺ T-cells in EAE mice, which has been supported by the observation of the increased density of CD8⁺ T-cells in the perivascular cuffs of spinal cords of EAE mice [42]. Further, the attenuation of EAE by 3-Aminobenzamide treatment was confirmed by MRI studies. The T2-weighted images of the EAE mice receiving 3-Aminobenzamide

treatment appeared to have a greater area of diffusion on the side of the CNS and a smaller area on the side of EAE (Additional
