Module Spotlight October 2018 Xnor&reg stands for cross-nand. A cross-nand (Xnor) device is a truly cross-chip non-volatile memory chip module that consists of two NAND chips and is usually a serial die such as a TLC-NAND, SLC-NAND, or PLZR-NAND. The idea is that it's easier to interface a series of such devices to one or more chips for certain purposes, than to connect two or more of the same type NAND chips with their full-duplex I/O buses to each other. We are pleased to announce that the System Master XNOR solution has passed Linux kernel certification. The tested SKU is a 64-layer XNOR-FM KG-XNOR-LDD (SLC-DDXNOR). The device was tested using the latest version of our OpenOCD program version 2.9.1.9 and passed all the tests with satisfactory results. The XNOR device is a system-master of 200 nm XNOR-FM NAND IC and is the first solution from System Master with the following main features: I/O and Memory addressability: XNOR device can be connected to any number of I/O and memory chips that have access to the XNOR I/O pins, which allows to control the chips together with the XNOR I/O line. Low-latency operation: The device allows to access data on the memory lines at the level of unaligned addresses. This enables to reduce the address translation time (i. 6a5afdab4c

The Z3 is a mid-range handheld game console developed by the market leader for the Zilog Z-80 family, Zilog. The console was released in Japan in December of 1983 by the NTT DoCoMo. A successor of the Game Score, the Z3 was a mid-range console to its predecessor, but in many ways it improved the latter's performance. The console's processor runs at 5MHz instead of 6MHz. The analog PPU (2 Z80s, 2x 8-bit DACs, 3x 64-K RAM) is running at 3.25MHz. The console comes with 4 Zilog Ltd, 1 AGS Ltd, and 1 Hitachi Ltd cartridges, usually one game is made for all 4 cartridges, though others are made by different companies. In the memory of the console, you can find up to 32K of the Main memory plus 0.5K of data memory, this makes total memory of 33K for game cartridge and 63K for game cart + game cartridge. The Z3 also has a number of improvements over the Game Score : ●A dedicated video output rather than the Game Score's composite video output ●A few more slots for game cart, the video card is running at 5MHz. The number of cartridges are enhanced, it's now the same as in the Game Score (4 in total). ●The console is now not held by the single cord and has a detachable face plate. ●The LCD display quality improved, 256×240 in double-resolution mode and 320×240 in single-resolution mode (Game Score had 256×192) ●The controller now has all the Zilog buttons + 2 additional ones, one side still being the Zilog reset button and the other side being the Zilog cross key (Game Score did not have a Reset button, but it had a similar character shaped button on the top right corner of the controller). ●There are no Zilog Ltd, AGS Ltd and Hitachi Ltd carts anymore, but you can find Nintendo games and Midway games. ●Many games from both Nintendo and Midway are now being made for the Z3.
