AutoCAD is used worldwide for designing a wide range of products, from architectural and civil engineering projects to toys and graphic design. It is the second most widely used commercial CAD program in the world, according to market research firm Info-Tech Research Group. Some reports estimate that AutoCAD is used by approximately 80% of all architects and engineers in the United States. About this article AutoCAD is a modern product, a product of the 80s. AutoCAD is a modern product, a product of the 80s. But unlike modern products such as new cellular phones, AutoCAD is not really new. It's older than most people realize. And you don't have to be a rocket scientist to use it. Anyone with a copy of AutoCAD can become an AutoCAD expert, so if you're a novice, you can learn to use AutoCAD effectively with a few hours of training. And if you're more advanced, you can use AutoCAD effectively to design all kinds of products, from gadgets to skyscrapers. But AutoCAD isn't just a tool for architects and engineers. Over the years, millions of people have used AutoCAD to design thousands of products ranging from space shuttles to Barbie dolls. Before AutoCAD came along, CAD design was a complicated process involving several different software programs. The most popular program, Drafting and Designing in AutoCAD, was introduced in 1983 and ran on a simple, affordable computer called the Apple II. AutoCAD is a member of a group of software products known as CAD (computer-aided design) tools. These software programs are used to design and plan everything from automobiles to skyscrapers. (For more details, see CAD tools and technologies.) AutoCAD's first major innovation was the ability to easily turn 2-D drawings into 3-D images. Instead of using a camera or a laser beam to show an object's true shape, AutoCAD lets you interact with a 3-D model and see it in real time. With 3-D, you can design an object in your mind's eye and see what it would look like in real life. Other innovations include the ability to quickly and easily create 3-D drawings and plans, and even 2-D drawings for reverse engineering and later use in actual manufacturing. Auto

IEEE Std 1361-1998 and IEEE Std 1361-2001, IEEE 1361 and IEEE 1212-1998 are part of AutoCAD's international drawing standard. They are basic set of drawing standards widely used among the CAD and graphics community. The IEEE Std 1361-1998 Drawing Standard The IEEE 1361-1998 Drawing Standard (or IEEE 1361) is a technical standard for the exchange and archival of digital drawings. It is IEEE standard number 1361-1998, published in January 1999 and developed by the Institute of Electrical and Electronics Engineers (IEEE). The

IEEE 1361-1998 Drawing Standard is designed to assist in the exchange of drawing information. It applies to the recording of all information related to the construction of a drawing including geometry, dimensions and linetypes. The standard sets out to provide a standard for the representation and exchange of building drawings. It is designed for use by architects, engineers and other interested parties. The standard is a major standard for construction industry professionals. It provides a common language for discussing and exchanging information related to building drawings. The IEEE 1361-1998 Drawing Standard provides standards for the exchange of drawing information and attributes and consists of: Presentation System Description (PSD) - This defines the characteristics and layout of the drawing Presentation Reference System (PRS) - This defines the geometric and other characteristics and attributes of the presentation of the drawing. Data Representation Language (DRL) - This represents the drawing as a set of CAD data objects The IEEE 1361-1998 Drawing Standard is often used in conjunction with the D-Cubed Projective Data Representation which builds upon the IEEE 1361-1998 Drawing Standard to address more technical and advanced features of digital building model exchange. The IEEE 1361-1998 Drawing Standard is the basis for the following standards and products: AutoCAD D-Cubed AutoCAD Architecture AutoCAD Electrical AutoCAD Civil 3D ICOS Apraxia Metrologic Systems The IEEE 1361-1998 Drawing Standard also has a number of related standards. The following standards are some of the more well-known and relevant standards: Standards Sub-standards IEEE Standards for IEEE 1361-1998 Sub-standards IEEE 1361-2001 Drawing Standard The IEEE 1361-2001 Drawing Standard (or IEEE 13 5b5f913d15

Q: call a method dynamically from a string how to call a method dynamically from a string? I have a string like this @"myMethod("string1","string2","string3")" How to call the method that have the method name from this string. Thanks. A: You could use reflection to get the method (the '3rd' parameter is always the 'this'): ParameterInfo[] paramInfos = Type.GetMethod("myMethod").GetParameters(); Type type = paramInfos[2].ParameterType; string methodName = paramInfos[2].Name; object[] arguments = { "1", "2", "3" }; MethodInfo method = type.GetMethod(methodName, BindingFlags.Instance | BindingFlags.Public | BindingFlags.NonPublic); method.Invoke(null, arguments);

And if you have a string where the method name is not the only text that you can get it like this: string methodName = paramInfos[2].Name; string methodDescriptor = paramInfos[2].Name + "(" + paramInfos[0].Name + "," + paramInfos[1].Name + ")"; MethodInfo method = type.GetMethod(methodName, BindingFlags.Instance | BindingFlags.Public | BindingFlags.NonPublic);
