You can then drag the blinking cursor anywhere on the image to create a new layer (see the next section for details). Granulocyte colony-stimulating factor improves perfusion in the acute limb ischemia. Biological agents may improve the outcome in patients with limb ischemia. The present study was performed to investigate the effect of granulocyte colony-stimulating factor (G-CSF) on the local microcirculation in a patient with critical limb ischemia. After partial limb amputation we tested the effect of G-CSF administration at single doses of 1 microg per kilogram per hour body weight per hour for 3 consecutive days. In the affected limb erythrocyte velocity (REV) and wall shear rate (WSR) were quantified using laser-Doppler flowmetry. The microcirculation was impaired in the affected limb compared to an equivalent area in the healthy limb, i.e. REV 5 s(-1). Within 24 hours of therapy the local REV increased from 6 to 18 mm/s and the local WSR increased from 5.6 to 15.4 s(-1). This finding was accompanied by an improvement of the distal venous pressure and calf muscle necrosis. The results show that a single G-CSF administration improved local tissue perfusion in a patient with acute limb ischemia.Q: How to make a connection to MySQL using c++ I'm still in the very beginning of my project and I have already made a connection to SQL Server, MySQL and SQLite.
