AutoCAD Crack Free Download starts up in the screen at the bottom left, before displaying the standard Main menu and the AutoCAD Cracked Accounts logo. To load AutoCAD Activation Code, click File | Open and navigate to the AutoCAD Cracked Accounts program file. Once the CAD program is opened, there are two primary work areas: the drawing area and the drawing window. The main work area or drawing area is the canvas where the drawing is created. Here, objects are created and manipulated, via a collection of menus, widgets, and commands that interact with those objects. Any unclosed entities are in the Selection Windows workspace. The Selection Windows workspaces are used for modeling the various components of a drawing, and manipulating them in a 2D or 3D environment. For instance, the Measurements workspace is used to place dimensions on 2D objects, and the Properties workspace is used for 3D modeling. The drawing window is the window that contains the drawing itself. The drawing window displays the working drawing area, any measured objects, and any annotation layers. Here, objects can be edited, objects can be created from the drawing, and annotations can be made. When in the drawing window, a new work area can be created by selecting the workspace tab. Once the workspace is selected, drag the cursor within the drawing window and drop on the blank area. To close the work area, double click it or press the Escape key. A 2D drawing can be created from the following drawing components: • Paper or canvas: It can be a simple blank page or an open space that is a starting point for a drawing. This area can be created either manually or automatically using the Paper Setup Tool. • Layers: Layers are a group of entities that are grouped together in the same way as other groups. Layer entities are used to create visual objects on the page, such as the section header, paper, or annotation layer. • Dimensions: Dimensions are used to specify the size of an object on the drawing page. Dimensions can have text and specified values that are used to create objects in the drawing area. The values for the dimensions are displayed in the drawing area in a titleblock. • Blocks: Blocks are used to contain other components of the drawing, such as a text or dimension, and all of the objects that are inserted into the block. • Named Blocks: Named Blocks are groups of other blocks that are stored in a document, such as a group
