Synchronous execution of commands AutoCAD 2011 can do simultaneous or nearly simultaneous drawing operations from multiple processes, or clients. When AutoCAD 2011 is running as a service (such as a background task), other users can draw on the same drawing, but may not be able to use other editing tools and commands. AutoCAD 2011 also allows the use of AutoCAD's drawing design time data in the background, and can open files and operate on drawings that are not currently open, allowing users to do advanced things without having to use a third-party add-on, especially when moving data between projects, creating an archive of the original file, and then modifying that data in the background. Graphics-based text In AutoCAD, text (blocks, objects, attributes, type characters, or text strings) are either automatically created or created at the time they are created, depending on the context. In AutoCAD, text is designed to be both readable and displayable on various types of devices. AutoCAD does not support automatic (hard-coded) typesetting of text. Text is stored as font data, which includes glyphs (letters or symbols), styles (font attributes), and positioning information. To calculate the style and placement of a text, AutoCAD renders a path and applies the defined outline to it. AutoCAD includes the ability to zoom into a block and read the placement and style of the text for that block. If the block or text is selected, the path and style information can be edited or changed. AutoCAD supports various style types: Text, Text Block, Text Attributes, and Text Styles. AutoCAD 2010 introduced cross-layer editing of text styles. Text styles can be applied to blocks (objects) and to text strings (attribute blocks). Text styles are not visible in the ViewCube, but can be customized with the Customize tool. Text styles can be applied to blocks (objects) by drawing a text box and selecting a text style from the drop-down list of Style options. Text styles can also be applied to strings (attribute blocks) in the Properties palette. Text attributes are groups of characteristics of the text that can be associated with a type of text and applied to an individual character, character string, block, or objects. They can be applied to a text type (e.g., Text), object, string, or attribute block. Text attributes are visible in the ViewCube and can be edited

DesignFlow markup control: DesignFlow enables you to more quickly edit, modify, and compare multiple designs across software, enabling you to more quickly find and correct problematic drawings and files. (video: 1:32 min.) Design flow This video shows design flow. The design flow process allows you to create, share, reuse, and update designs that make your work more productive. Design flow is intended to bring together the functionality of DesignXpress and AutoCAD. You can make decisions about which parts of your design and process to automate, and you can then use the solution in other places in AutoCAD as needed. For more information on design flow, see the Design flow topic in the Help, which includes information on how to set up design flow. Click to view larger version of this image DesignXpress DesignXpress is available as a standalone download. You can use this method to load your designs with linked attributes and parameter values. For more information, see the DesignXpress topic in the Help. The new Bookmarks feature in DesignXpress allows you to easily organize and display all your drawings and shared designs. For more information, see the Bookmarks topic in the Help. The new Click-to-Glue feature in DesignXpress allows you to quickly attach your designs to PDFs, use the PDF as a tool palette, or add to an existing drawing. For more information, see the Click-to-Glue topic in the Help. The new Option Palette feature in DesignXpress makes it easy to access all the options in one place. For more information, see the Option Palette topic in the Help. The new Shape History feature in DesignXpress displays the details of selected shapes and marks. The tool also provides links to the related drawings and tool palettes. For more information, see the Shape History topic in the Help. You can now work with several sets of views at a time with the new View tabs. You can also set the number of rows and columns for any view. For more information, see the View tabs topic in the Help. You can now print drawings with annotations such as printing speed, time, and time remaining. The following features are available when printing: Print time: Displays the time required to print the drawing. Print speed: Displays the speed of the
