There are hundreds of different ways to use Photoshop, but here are the 30 best Photoshop workflows you can learn with books, online tutorials, video tutorials, and workflows. Raster Image Editor

The most common type of image used in Photoshop is a raster image, or bitmap. The term raster relates to images that are composed of dots, like a rasterized screen, because these pixels are arranged in a grid. The other common type of image is a vector image, where shapes, lines, and curves are precisely placed using mathematical formulas. Photoshop supports both raster and vector images. Each layer of a Photoshop image is composed of multiple pixels. When you select a layer, click the layer's thumbnail to move it to the top or bottom of the image window. The image can be edited on each layer by using the tools, or the layer can be moved to another location to create multiple layers. A smart object can also be made in Photoshop without having to create a separate Photoshop file. Photoshop's different tools

can be found on the Tools menu, which you can open by pressing $\uparrow \text{⌘}T$ or pressing $\text{Ctrl} + T$. The Layers panel provides a list of all the layers in an image. The Background layer shows any existing layers. You can change the name of a layer to make it easier to identify it, which can help identify its purpose. Adobe's Layer Adjustments panel provides adjustment tools for each layer, such as the Exposure, White Balance, and Shadows and Highlights adjustments. You can also use the Paint Bucket tool to fill areas on a layer. To create or edit individual layers, select the desired layer or layers in the Layers panel, and then select the desired edit tool from the Tools menu. In addition, the layer tools make working with layers on the bottom of the image easier. As you work on a layer, the tools work along the "z" axis, from top to bottom. Smart Objects and Actions A Smart Object is a layer that has been set to be editable but not saved with its own file. To do this, click the Smart Object icon on the bottom of the Layers panel to open the Smart Object dialog box. You can use the Smart Object dialog box to open a file in Photoshop. You can add or subtract layers from the Smart Object, change the size, move the layers, and control which layers you can edit.

Q: if X and Y are independent, prove $X+Y$ and $2X$ are independent. Let X and Y be two random variables that are independent; a) Show that $X+Y$ and $2X$ are independent. b) Let X and Y have the normal distribution with mean μ and standard deviation σ . Show that $X+Y$ and $2X$ are independent. I proved that they are independent in a), so I don't know what to do with b).
