Installing Adobe Photoshop is not as straightforward as installing it. It requires a few steps to bypass the security measures that are in place. First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

If you have pre-ordered Lightroom 5, you will receive a complimentary upgrade from Adobe Creative Cloud. You can also download the free trial of Lightroom 5 right now, and see if you like it. If you'd like to buy the program, it is available for Windows, Mac and iPad and for \$119 (or \$129 for the update to Photoshop CC 2015). (For more details, see this great article from the new Digital Photography Review: <http://www.dpreview.com/lightroom5> . I am a little disappointed with it, but not in a bad way. I do believe that the handwriting features and the very convenient pointing devices work well together. It finds the beginning of a stroke and then it reopens (or opens) and edits it. The handwriting is 'fast and easy'. It is very intuitive and easy to understand.

However, if you need to have any kind of artistic judgement, the hell you are on your own. You can't even see in any way how a change will look like. It does the automation but you can't follow it.

I am looking forward to an update of Photoshop, but I am not sure whether I will buy it or wait a little while longer (to see if it gets better). I've recently upgraded and have not had any performance issues, however I've been using the current version of PureBite as well as the ExpressBrite and the Artblade tools (which is a rather interesting project, if you enjoy painting in the digital world, or want to create digital art). I've had no issues, I am now using Artblade and PureBite and my workflow on my Macbook Pro goes quickly. I'm sure Google is learning from Photoshop (it's a big one) so I imagine that will only continue to get better and better.
