The first thing you'll notice in Photoshop is the art board. You can drag your file or take a photo and create a new art board. You can also copy and paste an image to use as a new image layer on your artboard. To cut an object, position the cursor and click on the area where you want the object to disappear when the cut is complete. Similarly, to copy an object, place the cursor on the area where you want the object to be duplicated and click. Next, you'll open up a set of basic drawing tools. If you have control over the size and position of the tool, you can resize it and move it around. If not, you can zoom in or out to make each tool larger or smaller. The brush works best for smaller areas of color, since it can be applied more often. It has strong control over adjusting color values, which makes it useful for working with different sorts of art boards. Brush settings allow you to change the size, opacity, shape, and angle of the brush. The Colour tool allows you access to colour options. You can adjust colour values, and create and apply colour libraries. Colour behaves similarly to the Brush tool, except Colour allows you to make changes directly on layer by layer. Instead of simply adjusting a color value in one spot, you can use the Colour Tool to paint around or entirely over different layers. The Eraser tool allows you to remove edits your have made to the artwork. It can be used with the Brush tool to create a gradient, or it can be used to remove selections. It is very useful for getting rid of artistic errors and for creating clean, smooth edges and fades e3d0a04c9c
